Noise Pollution:**

The proposed facility is likely to generate substantial noise pollution, which will disrupt the tranquility of the surrounding residential areas.

- Increased operational noise, particularly during early morning and late evening hours, raises serious concerns about the impact on local residents' quality of life.

Traffic Concerns:

- The introduction of a recycling centre will inevitably lead to an increase in heavy traffic, causing congestion on local roads that are not designed to accommodate such volumes.

- The potential for increased traffic accidents and safety hazards, particularly for pedestrians and cyclists, is a significant concern that must be addressed.

Air and Water Pollution:

- The recycling process may result in harmful emissions that could degrade air quality, posing health risks to local residents.

- There is a risk of pollutants entering the local water systems, which could jeopardize the health of the ecosystem and the community's drinking water supply.

Intensification of Use:

- The establishment of this facility represents an intensification of use that is inconsistent with the existing zoning regulations and objectives of the area.

- This change in land use could set a precedent for further industrial developments, undermining the community's long-term planning goals.

- Increased human activity and pollution could disrupt local wildlife, posing a threat to native species and the overall health of the ecosystem.

Community Impact

- The proposed recycling centre does not align with the community's vision for a sustainable and healthy living environment.

- Local residents have expressed strong opposition to the project, highlighting the lack of community engagement in the planning process.

- In light of these concerns, I urge the planning authority to reconsider this proposal and prioritize the health, safety, and well-being of our community and environment.
