A facility of this kind may be required and I support such developments on the condition that all development, regulatory and environmental conditions are met, and that there is no risk of air, water or material contamination leaving the site.

My view is that, due to the volume of raw and processed material proposed to enter and leave such a facility, it should be located adjacent to a railhead with the bulk of material transferred via rail.

I firmly believe that due to noise, fire and potential off site contamination risks, the proposed site is not fit for purpose.
