*As a member of the Southern Highlands community for many years I strongly object to this facility being developed on this site. This development is being pushed through and as a resident of the Southern Highlands I have only just become aware of this facility. This type of development should of been advised to all residents as it will impact all our health through the air and in our water. This facility CAN NOT proceed. The development should not be built close to water ways which in turn feeds into the Sydney water catchment, this is an accident waiting to happen. The Highlands area is a semi rural area, people have moved and visit the area for the clean air, the plastics burnt here will produce particles which will be pushed into the air and will effect people's health. This facility can not be built here.*
