I oppose to the Moss Vale Plastic Recycling facility.

Plastic Refineries contribute to water contamination through the release of toxic chemicals and plastic particles during the production process. Improper waste management, leakage from storage tanks and failure of filtration systems can allow harmful substances like heavy metal, solvents, and plastic additives to enter water bodies. These pollutants can contaminate our riparian river (which leads to Sydney Water) and groundwater, posing serious risk to aquatic ecosystem and human health.

Plastic refineries play a significant role in the degradation of water quality and the overall environment.
