I strongly oppose the proposed plastic refinery plant in Moss Vale on behalf of local residents who have voiced clear discontent with the project. The democratic process must respect the voices of those who live and work in the community. It is evident that the majority of residents do not support this development, yet their concerns are being disregarded. This undermines the very principles of democracy and community consultation.

Beyond these fundamental issues, the proposed refinery presents significant health risks. The release of pollutants from plastic refining processes is known to impact air and water quality, contributing to respiratory and other health issues. Our community should not be exposed to such hazards, especially when they have expressed clear opposition to it.

Additionally, the plant will drastically increase traffic congestion, posing further safety risks. Moss Vale is a quiet, residential area, and an influx of industrial traffic will threaten road safety, increase noise pollution, and diminish the quality of life.

The interests of the community must come first, and the democratic process must honour the residents' overwhelming objections to this development. We urge the Commission to reject this proposal in favour of a solution that truly benefits the people of Moss Vale.
