*Objection to Plasrefine Plastics Recycling Factory in Moss Vale*

*To whom it may concern:*

*I am writing to formally object to the proposed Plasrefine plastics recycling factory in Moss Vale. My wife and myself are primary producers in the area. The risk of contamination of our local pastures and waterways is of overwhelming concern. Some of my concerns are listed below. While I appreciate the need for effective waste management, I have significant concerns regarding the potential impact and location of this facility on our local environment and community.*

**1. *\*\*Fine Plastic Dust Contaminating Local Farmlands\*\****

*The operation of a plastics recycling facility raises the risk of fine plastic dust contaminating local farmlands. This dust can spread through the air and settle on crops, posing a threat to the quality and safety of our agricultural produce.*

**2. *\*\*Livestock Ingesting Fine Plastics\*\****

*There is a serious concern regarding livestock inadvertently ingesting fine plastics. This could lead to health issues for the animals, which not only affects their well-being but also poses a risk to human health through the food chain.*

**3. *\*\*Negative Impact on the Reputation of the Farming District\*\****

*The presence of a plastic recycling factory could negatively impact the reputation of Moss Vale as a clean and sustainable farming district. This perception may deter potential buyers and visitors, affecting the local economy and community morale.*

**4. *\*\*Decrease in Livestock Sales\*\****

*As a result of potential contamination from fine plastics, we may see a decrease in livestock sales. Farmers depend on the trust of consumers, and any perception of contamination could severely impact marketability and sales.*

**5. *\*\*Health Concerns for Residents on Tank Water Supply\*\****

*Many homes in our community rely on tank water supplies. The risk of fine plastics contaminating roof surfaces and subsequently entering our water supply raises serious health concerns for residents. This is particularly alarming for vulnerable populations such as children and the elderly.*

6. ***\*\*Impacts on the Greater Sydney Water Supply\*\****

*The potential contamination from the proposed facility could extend beyond our local community, affecting the greater Sydney water supply. This underscores the need for thorough assessments of the risks associated with the factory.*

*Given these significant concerns, I urge the council to reconsider the approval of the Plasrefine plastics recycling factory. It is essential to prioritize the health, safety, and reputation of our community and environment.*

*Thank you for your attention to this matter. I look forward to your response.*

*Sincerely,*

*John Diaz*

## Objection to Plasrefine Plastics Recycling Factory in Moss Vale

To whom it may concern:

I am writing to formally object to the proposed Plasrefine plastics recycling factory in Moss Vale. My wife and myself are primary producers in the area. The risk of contamination of our local pastures and waterways is of overwhelming concern. Some of my concerns are listed below. While I appreciate the need for effective waste management, I have significant concerns regarding the potential impact and location of this facility on our local environment and community.

### 1. **\*\*Fine Plastic Dust Contaminating Local Farmlands\*\***

The operation of a plastics recycling facility raises the risk of fine plastic dust contaminating local farmlands. This dust can spread through the air and settle on crops, posing a threat to the quality and safety of our agricultural produce.

### 2. **\*\*Livestock Ingesting Fine Plastics\*\***

There is a serious concern regarding livestock inadvertently ingesting fine plastics. This could lead to health issues for the animals, which not only affects their well-being but also poses a risk to human health through the food chain.

### 3. **\*\*Negative Impact on the Reputation of the Farming District\*\***

The presence of a plastic recycling factory could negatively impact the reputation of Moss Vale as a clean and sustainable farming district. This perception may deter potential buyers and visitors, affecting the local economy and community morale.

### 4. **\*\*Decrease in Livestock Sales\*\***

As a result of potential contamination from fine plastics, we may see a decrease in livestock sales. Farmers depend on the trust of consumers, and any perception of contamination could severely impact marketability and sales.

5. **\*\*Health Concerns for Residents on Tank Water Supply\*\***

Many homes in our community rely on tank water supplies. The risk of fine plastics contaminating roof surfaces and subsequently entering our water supply raises serious health concerns for residents. This is particularly alarming for vulnerable populations such as children and the elderly.

6. **\*\*Impacts on the Greater Sydney Water Supply\*\***

The potential contamination from the proposed facility could extend beyond our local community, affecting the greater Sydney water supply. This underscores the need for thorough assessments of the risks associated with the factory.

Given these significant concerns, I urge the council to reconsider the approval of the Plasrefine plastics recycling factory. It is essential to prioritize the health, safety, and reputation of our community and environment.

Thank you for your attention to this matter. I look forward to your response.

Sincerely,

John Diaz
