With all recent revelations about the high levels of PFAS in the drinking water, and the emerging research into the ill-effects of microplastics in every type environment, what kind of government policy allows microplastics and toxins spewing out of a plastic recycling factory in the Southern Highlands, a major water catchment of Warragamba, to filter into the river systems that feed the dams and drinking water of the population of greater Sydney? Government policy is not keeping up with the science! The IPC must decline this proposal!
