*I am very disappointed that Plasrefine has chosen such a beautiful site so close to residential homes to put their heavy industrial recycling factory on.*

*I live within close proximity to the site and will see it from our house every single day. I cannot understand why they would put such a factory so close to our houses and community*

*Our tank water that we drink is going to be heavily impacted by the pfas and micro plastics*

*The food our animals eat and the water they drink will also be heavily polluted by the micro plastics/ pfas*

*It is too close to residential areas and will have a constant negative impact on all our community.*

*There is no buffer zone. How can this factory be built so close to our houses???*

*Our roads are already in a terrible condition so how will they cope with such a massive increase in truck and car movements every day*

*Who will police the route that the trucks and cars are going to use and make sure they are taking the right roads away from the already congested town?*

*What is going to happen when the roller doors are open and it's windy? The microplastics will go everywhere and Plasrefine cannot guarantee there will be no materials escape.*

*How can Plasrefine guarantee it will not negatively impact the Garven Institute which is there to help save lives not destroy them like Plasrefine is going to do??*

*How can Plasrefine and GHD guarantee no microplastics/ pfas will be washed into the Wingecarribee River which I notice they said in the last online meeting they had with the IPC*

*This is not the right site for this Heavy industrial factory and should be put well away from our community and town*

*It is NOT the right site*
