*I write to oppose the development of the Plasrefine facility on the site planned. My specific objection relates to residents of Berrima, who include my children and grandchildren. The grandchildren live in close proximity to [REDACTED] which they will attend starting next year. The approximate distance is 4.5 km as the crow flies.*

*My objection relates to confidence in the planning of atmospheric security. Despite all assurances, out of its own publicity, the developers and project managers have betrayed their own confidence in this aspect of the development.*

*GHD has, inter alia, released 'advice' to ensure nearby residents that the pollution can reduce their exposure by staying indoors. Appendix J states People living near the site would be able to manage their exposure to air quality impacts through minimising time spent outdoors.*

*My objection is not technical. You will doubtless receive multiple submissions on that aspect. Mine seeks to expose the flawed logic of the developers in the assurances offered that the plant is safe and secure and will not affect the atmosphere of those living in the vicinity. By its own admission, this facility will inflict 'exposure to air quality impacts' which require residents to 'manage'. It is a glaring logical fallacy.*

*This is but one uncertainty that offers me, and the local community no confidence that the technology proposed will live up to its promise and do no harm. In the absence of such confidence, this project should not proceed.*
