*My family and I live at [REDACTED] Moss Vale. We have worked very hard as a family to be able to buy our 11acre block which we have greatly improved and have invested a lot of time, money and hard work into. We try to provide a healthy life for our children where we hand milk our own house cows, raise some of our own meat, have chooks for eggs, grow a wide range of fruit and vegies and drink tank water which is collected off our house and shed roofs. Our house is only a few hundred meters from the proposed Plasrefine site and is located west north west of the site pretty much directly down wind of the site without any buffer zone. Why is this aloud? This factory should never be aloud to be built so close to our homes. Not only is too close to residential areas but it will also be running 24\7 with a great number of truck movements every day this noise pollution would send anyone mad that would live in such a close proximity as so many of us do. It is not the right site for such heavy and hazardous industrial factory. The fall out from the micro plastic pollution to our roof collected tank water and pastures for our animals would totally destroy the healthy life we try to live. There is no doubt we would have to sell our house and life we have built and move if Plasrefine was to go ahead. But who would want to live in this noise and plastic polluted environment? The value of our property would be dramatically affected!!*

*GHD has said if it's a windy day we should stay indoors but I ask you why? Why should we have to upend our lives and accommodate Plasrefine when it is extremely clear that they never have and never will take our health into their consideration. Such a factory should never be built so close to residential areas it's just not the right site and must not go ahead.*
