On behalf of my family and I would like to make a submission AGAINST the Moss Vale Plastics Recycling Facility, Plasrefine, on the following basis.

- This company has no experience in plastic recycling, and has [REDACTED].*
- The documentation is not sufficient in how they will control microplastic, air and water pollutants, for both the immediate locality and for the drinking water catchment that will be affected.*
- No detail is provided on the filtration of waste water discharge, or the chemicals used in the processing.*
- The proposed facility is significantly larger than any other plastic recycling plant within NSW, and significantly closer to homes.*
- The residential roadways cannot support the proposed number of truck movements.*
- The 3D drawings provided do not accurately represent the design of the structure.*
- The proposed facility would displace the Southern Highland Innovation Precinct and the innovative small scale business which would have been attracted to the area.*
- The proposed facility was already rejected by Wingecarribee Council, based on its detailed understanding of infrastructure and future planning for the area.*

Plastic recycling is clearly an important activity, however this is not the right location for this facility.

Please ensure this facility does not proceed.

Best regards,

Katie McGuigan
