My major concerns are the pollution that this project will cause to our pristine environment and the peace that the local humans, native animals, breeding cattle now enjoy. Not to mention the Garvan Institute.

Moss Vale was built over 100 years ago and does not have the infrastructure to support this type of project. The streets are too narrow.

The project site is to the west of the town so any pollution would be covering the town constantly. There would be excess dust and fumes not only from the site itself but from the trucks driving through our town. The roads are full of potholes now yet alone bringing in more trucks.

When a fire at the site happens we do not have any way of dealing with it as we only have 1 fire truck and it does not have the structure to deal with a industrial plastics. Our local hospital is in Bowral, over 15 klms away.

The local environment would be ruined, our air quality, our waterways, the landscape, the native animal population - they have no say. We would constant noise and this will effect the residents in the town yet alone the people who have properties a joining the site.

This is not the right site.
