As a resident of Moss Vale I have objection to this operation for the following reasons:

Traffic - excessive use of road close to residential homes - bringing an excessive amount, perhaps as much as 120000 tonnes of plastic to be disposed from outside the local area

Has any research been carried out on how vehicle trip will be made each day to bring the plastics to the facility

Pollution from the excessive traffic movements required to bring the plastics into the area for destruction - it was said if the pollution / air quality is poor outside residents can go into their home and shut their door / windows

Wild life - what will be the effect on the wildlife in the area - there are Platypus in the local river, the bird life

Character of the are will be destroyed - has any research been undertaken on the historical importance in the area

Recently the Australian Bio Resources / Garvan Institute have requested "additional funding ", what makes mice bred for research more important than health and well being of residents in the local Moss Vale Community

Additional funding - this begs the question, how much have they already received. Will the local community be offered any funding / financial compensation for the pollution of the area

Water supply - what effect will this inappropriate industry have on the quality of water for the local community and for Sydney - this area is a major catchment for Sydney water
