First, do no harm.

Clean air and waterways protect community health. The Plasrefine project threatens both. I don't want my grandchildren in Berrima breathing tainted air, drinking water filled with microplastics, or having to limit their time outside due to air pollution.

Appendix J from GHD states

People living near the site would be able to manage their exposure to air quality impacts through minimising time

spent outdoors.

Clearly, there would be harmful effects in air quality through the operation of such a facility.

The site is too close to homes. It's a risk to our children's safety. It's a risk to our farming land, to flora and fauna, to our waterways, to the environment generally. The increased traffic movements alone should preclude the construction of such a facility in a residential zone.

This is not safe. Not for our children and grandchildren. It is not the right site.
