*I am a student at Oxley College, which is about 3.8 km from the PlasRefine site, as the wind blows.*

*This facility will cause highly toxic pollution to be blown over my school. I will be breathing in microplastic dust and other toxins. Worse still, as a child, I am especially susceptible to the bad health effects of these chemicals. In the long term, they can affect my fertility and they can even cause cancer. Children need to be protected from these industrial chemicals. We should be able to attend school without being totally scared about a factory nearby.*

*I am especially worried about a fire happening at PlasRefine. The prevailing wind blows straight over my school. Plastics facility fires are really toxic. We couldn't evacuate in time to avoid the smoke - there is only one road leading to our school and it gets easily congested with just the normal school pick up traffic.*

*Please IPC - I just want to breathe clean air and not get cancer. Please do the right thing by the children of the Southern Highlands.*

*Thank you so much.*
