While I object to the proposal on many grounds, I am particularly concerned that the storm water management is considerably lacking.

Essentially, the design will simply not cope with the rain events that we have seen in the last few years, the result of which will be that the water contaminants that are held in the holding dams will wash into the Sydney water catchment.

While these holding dams themselves have been placed to avoid being flooded by floodwaters, my concern is that the water that falls onto the facility itself has to flow through this holding dam system. The dams are simply not large enough to cope with the amount of water that will flow from the site. Put simply the dams will overflow spreading contaminants into the Sydney Catchment water supply.

Thank you for considering this objection.
