Hi there

While our country needs more capacity to recycle plastic, it is vital that the location chosen does not negatively impact upon the health of the local people and the environment. In this case, there is not sufficient verified evidence to conclude that the processors and chemicals proposed to be used, won't impact upon the water and air quality of Berrima, Moss Vale and Bowral. The proximity to the river and the potential leaching is clear and the mitigating strategies are not sufficient. Any risk at all, that this will have short, medium or long term impacts on the health of our community and our children, presents an unacceptable risk. The proximity to homes, schools and the river too close. The desire for the company to use this site due to access to the highway, should not override a potential health risk to citizens. I strongly object to this site being chosen.
