The amended application refers to 120,000 tonnes of plastic being processed each year in Beaconsfield Road, Moss Vale, a suburban street of a town which already has significant traffic issues. The number of movements will not, of course be monitored and could be any number.

For the facility to be located there is so ridiculous it is difficult to comprehend how it could be approved.

It will require a huge number of truck movements a day in a suburban street. It should be located in a rural area where the truck movements will have a lesser effect. Nearby, in a rural area, there is a cement factory and a chicken raising operation. They also have rail access. That is the sort of place a plastics processing facility should be located, not in a suburban street.
