I am appalled that the company proposing to develop and operate this giant facility has no experience in the recycling industry. How is this company assuring anyone about its credentials when it states that one way to reduce issues with air pollution is to reduce time outdoors!!

I am also concerned that the company will

I am gravely concerned with the complete lack of sensitivity this proposal had for the health and wellbeing of the local community. That the monstrous building will be so close to resident's homes with hundreds of trucks going in and out 24/7 is so far beyond any test of reasonableness that this proposal must be deemed unsustainable for community health and economic viability.

A conscientious and ethical assessment would not find this proposal suitable for the fringes of an urban community and for the same reasons it must not be placed on the fringe of a small community, where people deliberately choose to reside because of the peaceful and healthy quality of life.

I urge planners to be transparent and to respect the community wishes and find another location that will not destroy this community.

This proposal is completely devoid of respect for Australian values. I am sick and tired of Government that does not listen or respect its people!
