*I wish to oppose the plastic recycling facility in Mossvale namely for concern of environmental contamination, and subsequent human contamination by microplastic and PFAS. I am a Doctor of Human Health from Oxford University. My research and plenty of others has revealed the integration of these plastics into the human body, microbiome and developing foetus in pregnant women. Increasingly we are realising the harmful effects to our endocrine and reproductive health. We simply cannot have this facility in the vicinity of any water supply for the greater sydney region. Please if it must exist. Set it out in a more remote region to prevent mass contamination of our people.*
