*I am deeply distressed by the idea of the Plasrefine project on this site in Moss Vale.*

*Firstly, it is not in keeping with the designed aim of Southern Highlands Innovation Park (SHIP).*

*I understand it is necessary to have a site to treat plastic waste BUT being close in proximity to our townships creates enormous problems..!!*

*We are worried about air pollution and the very fact that the prevailing westerly winds will spread leaked pollution from this proposed factory. It will go far and affect residents and schools with large numbers of children.*

*We are worried about contamination to our water, and the shortage of the water supply, with the likely demand on the town water supply.*

*Fires seem to be a frequent occurrence with recycling plastic factories.*

*In the Southern Highlands we have very inadequate fire prevention.*

*If there is a fire, there will be a shortage of water and adequate firefighters, let alone the toxic pollution and other fire fallout over the town.*

*We are worried about the enormous numbers of heavy trucks coming and going all day, all week and all year, on these suburban roads which are not built for this overload. They would further create congestion to the Freeway too.*

*We are worried about the enormous numbers of heavy trucks coming and going all day, all week and all year, on these suburban roads which are not built for this overload. They would further create congestion to the Freeway too.*

*NOISE, NOISE, NOISE is what we believe to be another side effect from the trucks. Truck acceleration and deceleration. Vibration has negative effects on the nearby research being done at the research station, Garvon.*

*There appears to be no way all this will be monitored by our Council or the Police to keep the truck movements accountable*

*Why has this project given no consideration to using rail?*

*It is such an obvious mode of transport, and kind to our planet pollution by reducing truck pollution.*

# Moss Vale Plastics Recycling Facility (Plasrefine) Proposal

## Re Plasrefine

---

I am deeply distressed by the idea of the Plasrefine project on this site in Moss Vale.

Firstly, it is not in keeping with the designed aim of Southern Highlands Innovation Park (SHIP).

I understand it is necessary to have a site to treat plastic waste BUT being close in proximity to our townships creates enormous problems.....!!

We are worried about air pollution and the very fact that the prevailing westerly winds will spread leaked pollution from this proposed factory. It will go far and effect residents and schools with large numbers of children.

We are worried about contamination to our water, and the shortage of the water supply, with the likely demand on the town water supply.

Fires seem to be a frequent occurrence with recycling plastic factories.

In the Southern Highlands we have very inadequate fire prevention.

If there is a fire, there will be a shortage of water and adequate firefighters, let alone the toxic pollution and other fire fallout over the town.

We are worried about the enormous numbers of heavy trucks coming and going all day, all week and all year, on these suburban roads which are not built for this overload. They would further create congestion to the Freeway too.

We are worried about the enormous numbers of heavy trucks coming and going all day, all week and all year, on these suburban roads which are not built for this overload. They would further create congestion to the Freeway too.

NOISE, NOISE, NOISE is what we believe to be another side effect from the trucks. Truck acceleration and deceleration. Vibration has negative effects on the nearby research being done at the research station, Garvon.

There appears to be no way all this will be monitored by our Council or the Police to keep the truck movements accountable

Why has this project given no consideration to using rail?

It is such an obvious mode of transport, and kind to our planet pollution by reducing truck pollution.
