Apart from concern about incinerating a toxic material which doesn't degrade and the calamitous impact this will have on the environment and residents, the plant is slated for a residential area within the town boundaries near schools, childcare, waterways which feed into Sydney's water supply

The entire community is opposed

This is not just a local issue as it will impact Sydney. Hazardous microplastics, already implicated in disease, will leach into our water & contaminate our food and air.

. # Not the right site.
