I am writing to express my strong objection to the recommended approval of the Plasrefine facility in Moss Vale. After careful review of the Department of Planning and Housing and Infrastructure's (DPIE) assessment, I believe there are significant failures in the evaluation process that warrant rejection of this proposal.

This facility is too close to residential areas and represent a high risk to human, wildlife and residential property in the event of fire.

Schools and childcare facilities should be protected from the risks associated with this type of industry. As these facilities currently exist within 2km this surely is an inappropriate site.

The impact of this facility so close to the Garvan Institute needs further evaluation. The Garvan conducts critical research work to progress the treatment of common human diseases such as cancer and involves research mice housed in a carefully managed environment. Any additional noise, pollution, vibration and possibility of fire will have potentially devastating consequences for their research.
