Location: <i>New South Wales 2089</i>	
Attachment: N/A	

Submission date: 11/14/2024 3:05:05 PM

Many reasons why I object to this proposal, but the main one is the proximity to existing residential. There would be a high risk of human, residential and animal/wildlife loss in the event of a fire, not to mention the toxic chemicals that would spew into the air.

Plastic recycling refineries are usually classed as heavy industrial, due to risk of air/water pollution in event of failure of safety processes and extremely high re risk. There have been over 19 devastating res associated with plastics facilities since 2019 in Australia alone.

In a world trying to "go green", this is totally inappropriate, especially in a region such as the southern highlands, which is renowned for its natural beauty - forests, rivers, and national parks.
