It is a well known fact that koala populations are declining, in part due to loss of habitat. Koalas and other species will be affected if this development is approved, with fell clearing of a large area of state forest that is known koala habitat

This forest needs to preserved to help ensure the survival of koalas and other species of native animals.

We must ensure green corridor links are preserved for these animals.

I object to this quarry and the degradation of this forest and important habitat.
